Abstract: **PURPOSE:** To diagnose urinary organ cancer easily by determining the tissue inhibitor of metalloproteinases (TIMP-1) in urine.

CONSTITUTION: Difference of the concentration of TIMP-1 in urine between a healthy person and a patient of urinary organ is conspicuous as compared with the difference of concentration of TIMP-1 in blood serum when a new monoclonal antibody for TIMP-1, obtained from human cell, is applied to enzyme immunoassay. Consequently, urinary organ cancer can be diagnosed easily without causing any pain to a subject by measuring the TIMP-1 in urine. The TIMP-1 in urine can be determined for bladder cancer, liver cancer and ren cancer. This method is preferably employed in immunoassay utilizing monoclonal antibody.
